# Graphene/ graphene oxide doped Magnesium diboride superconductors

Filesize: 1.97 MB

# Reviews

*I actually started out reading this pdf. Of course, it really is play, continue to an interesting and amazing literature. I realized this pdf from my i and dad encouraged this pdf to discover. (Maddison Becker)* 

# GRAPHENE/ GRAPHENE OXIDE DOPED MAGNESIUM DIBORIDE SUPERCONDUCTORS

LAP Lambert Academic Publishing Nov 2013, 2013. Taschenbuch. Book Condition: Neu. 220x150x9 mm. Neuware - Owing to the high critical temperature (Tc) of 40 K, intrinsically weak-link free grain boundaries, and low fabrication cost, MgB2 is believed to be promising for replacing conventional low Tc superconductors in many cryogen- free applications. Nevertheless, its rapid drop in critical current under applied magnetic field and low critical field exclude it from many industrial applications where a high critical current density (Jc) under high magnetic field is required. Many studies have shown that carbon containing dopants are effective means to enhance the field dependence of Jc and the upper critical field (Hc2) of MgB2. This book describes extensive research efforts towards the improvement of the superconducting properties of MgB2 through graphene/ graphene oxide doping and explains the improvements in relation to the electromagnetic behaviour. This book further describes experimental details of graphene/graphene oxide production techniques. Therefore, this book should be of interest to a broad range of multidisciplinary researchers dealing with graphene, MgB2 superconductor, and their performances. 156 pp. Englisch.
